1-800-JETTING

US Jetting 4018 – 300 Gallon, Enclosed V-Front Trailer Mounted High Pressure Jetting Unit

Installation of a high pressure jetting unit into an enclosed trailer has always been a specialty of **US Jetting**. Enclosed trailers provide additional equipment storage, security and most of all, protection from the cold weather.

This V-Front enclosed trailer features a **US Jetting 4018 (4000 PSI @ 18 GPM)** 300 gallon high pressure jetting unit. It includes a 36" Hydraulic Power Pull-Out Hose Reel system with 500' of high pressure jetting hose and a Gen II Wireless Remote Control System

The V-Front trailer design provides maximum space in a 14' trailer enclosure with 72 inches of inside clearance (low profile design is also available). The V-Front allows for the installation of shelving for equipment and parts storage. A 36" wide curbside door provides easy access to the engine, pump and storage areas. Four (two on each side) lockable tool boxes are accessible from the outside of the unit for additional tool storage.

All **US Jetting Enclosed Trailer** units are custom manufactured to meet the needs and specifications of customers. Cold weather units include an Anti-Freeze System, insulation package and electric heating system. Enclosed trailers are also popular in warm weather climates where the enclosure provides security protection for the high pressure jetting equipment, tools and accessories.
